

RECLAMATION AND REMEDIATION

Nor-Alta Environmental Services Ltd. has the experience and expertise to effectively plan, coordinate and execute all aspects of Remediation and Reclamation. Our team is trained in multiple fields allowing them to “see the big picture” and perform cross-functional tasks without the need to dispatch additional personnel. Utilizing key environmental personnel with training, experience and knowledge of the entire scope of work provides our clients with efficiency and cost-savings.

Our team of professionals includes Agriologists, Biologists, Chemists, hydrogeologists, and engineers, working together to provide a wide range of environmental consulting services available throughout Western Canada.

We have multiple offices throughout Alberta that allow our team to mobilize quickly and efficiently to site for emergency response and cost effective mobilization. Our team is trained with the knowledge and expertise required to manage all types of reclamation and remediation projects. Nor-Alta’s experienced professionals collaborate with the client to determine the most environmentally responsible and cost-effective options to fully remediate, reclaim and conserve the soil and groundwater. We can manage all your surface reclamation issues, subsurface contamination, and obtain a reclamation and/or remediation certificate.
